
(A) Empirical nonnegative-benefit ranges
and the shared default
fixed default
(the grid ran here)
full·SGD+m (median)
full·Adam (median)
cells < static:
1 29 104 215 296 356
2 52 174 297 360 360 360
benefit % (median+IQR, 360 cells)
online learning rate
(B) Validation-based rehearsal substantially
reduces Adam's below-static cells
negative cells @default → @rehearsed:
Adam 174/360 → 4/360; SGD+m 29/360 → 7/360
full·SGD+m
full·Adam
L=96
L=192
benefit % at rehearsed LR
benefit % at the fixed default (10^-3)
